

CS2610 Assignment 3s Submission Guidelines

Teacher: Prof. Madhu Mutyam

February 11, 2019

How to Submit your Assignment

- The assignment directory must be named XXXXXXXX(your eight digit roll number in small case). For example, *cs18b001*
- The assignment directory should contain only source files. No binary files should be present in the directory.
- The assignment directory must contain two files, *endian.asm* and *io.inc*.
- *endian.asm* must contain the first problem i.e., “checking the endianness of your computer”.
- *io.inc* file should contain all the functions(13) given during the lab session. Names of the functions should be exactly the same as given in the presentation (Lec2.pdf). Each function should print a new line after its operation is completed (except for the `print_newline`).
- Compress the assignment directory in .tar.gz format with name of the compressed file as you roll number in small case.

Some general instructions

- The submissions are processed by automatic scripts, so it is very important that the submissions follow the guidelines specified. Anyone trying to submit without following the above mentioned guidelines will incur a penalty of at least 10% (may be more depending on the number of violations).
- You are allowed to do any number of submissions before the deadline. However only the last submission will be stored and evaluated.
- Please do keep the EXACT copy of your last submitted tar.gz files till you get your grades.

Plagiarism policies

- Plagiarisms in any form will not be tolerated.
- We will not differentiate between the source (giver) and the sink (taker). We will consider both the parties to have plagiarised.
